

Packaging development

How much would your business improve if your packaging system could be turned into a competitive advantage instead of a pure cost? Is your packaging strategy integrated with your production philosophy and are the packaging solutions optimal for your specific needs? Talk to our packaging development experts and they will tell you more about the potential cost saving and efficiency increases that are hidden in your existing packaging – and how to realise them.

Features

Packaging engineering offers a broad range of services from analysing the total packaging flow to choosing the right standard packaging to assure that your products arrive in perfect condition at the lowest total cost. The service also includes defining the optimal number packing configuration, issuing of packaging instructions and reporting of cost savings.

Packaging design comprises design of special packaging for specific products or needs. The service includes analyses of the total packaging flow, concept development, test and verification of prototypes, production drawings, purchasing of packages, quality control, packaging instructions and administration.

Your benefits

- You can focus on your core business and be sure to always have the right packaging solution for your needs
- You will benefit from functional, cost-efficient and reliable solutions that work smoothly in your day-to-day operation
- You don't have to invest your own resources to develop and maintain state-of-the-art packaging solutions
- You will benefit from flexible packaging solutions which can be adapted to account for changes in your business needs
