

Packaging management

Is your packaging system optimised for every stage of the production process and how does it support production fluctuations, relocations and new packaging demands? Do you have full control of all your packaging and do you know the real packaging cost? By utilising Volvo Logistics packaging systems you will gain all the benefits from tailor-made and cost-efficient solutions covering all your packaging needs globally.

Features

Having good packaging that protects your goods is, of course, an obvious requirement. Volvo Logistics packaging systems offer you more than that. Our packaging normally constitutes an integrated part of the customers' systems for lean production. They are recyclable with high cube utilisation, thereby minimising empty movements and environmental impact.

Our packaging systems are global in the true sense of the word, which means we can serve all your production facilities wherever in the world they are located. You can easily follow the packaging flow and gain full control of your packaging materials through our web based management system. And last but not least, you only pay for the packaging you actually use.

Standard packaging system

The simple solution: standardised packaging that is owned and administered by us. Choose from one of the market's most comprehensive packaging ranges - easy and convenient for you.

Special packaging system

When you have special needs: customer-tailored packaging that is owned by you but administered by us. We design, handle the manufacturing and manage the movements.

Packaging add-on services

We can also take care of cleaning and maintenance, sorting, marking, bundling and return of empty packaging.

Your benefits

- You have full control of your packaging costs and don't have to tie up capital in packaging
- Reduced costs since you only pay for the packaging you actually use
- Increased flexibility thanks to easy adaptation of volumes and packaging types to production changes
- Less environmental impact thanks to recyclable packaging and high cube utilisation thus reducing unnecessary movements
- Peace of mind, you can safely dedicate yourself entirely to your core operation
