Use of Volvo seat belt in transit

More and more it is discovered people try to avoid the 'seatbelt warning signal' while driving, by inserting one or another seat belt in the driver's buckle.

May we remind you the seat belt isn't designed for those purposes and requires correct usage.

By inserting the passenger's- or driver's seat belt in the driver's buckle it can create:

- * permanent damages/deformations on tunnel consol
- * constant tension in the seat belt retractor.

Seat belts are designed to reduce the risk of serious injuries in crashes! The seatbelt warning signal is there to remind the driver of using the seat belt while driving.

Therefore it's unthinkable people try to avoid the seat belt warning signal by inserting one or another seat belt in the driver's buckle.
